Food and Agriculture Organization of the United Nations

QUICK GUIDE: Species Height Master

Unit: Centimeters (cm)

🟢 STEP 1: Identification

Navigate to the **Add Species Age and Height Master** and fill the primary identifiers. These fields link your data to regional reports.

- **State/UT/Circle etc:** Select your specific region from the dropdown.
- **Species:** Search and select the plant name (e.g., *Tectona grandis* / Teak).

🟡 STEP 2: Height Entry (Growth Baseline)

Select the **Height Class** for each age interval. Ensure the growth follows a logical upward trend.

S.No	Age Bracket	Expected Height Class (Selection)
1	0 – 6 Months	🟢 *Select standard seedling height*
2	6m – 1 Year	🟢 *Select standard sapling height*
3	1 – 1.5 Year	🟢
4	1.5 – 2 Year	🟢
5	2 – 2.5 Year	🟢
6	2.5 – 3 Year	🟢
7	Above 3 Year	🟢 *Select terminal nursery height*

🟠 STEP 3: Remarks & Context

Add brief notes in the **Remarks** column to explain the data source or specific conditions:

- *Example:* "Standard growth for rain-fed areas."
- *Example:* "Applicable for root-trainer seedlings only."
