Food and Agriculture Organization of the United Nations

📁 Administrative Directory Master

This manual provides instructions on how to register missing administrative units (Circles, Divisions, Ranges, etc.) to ensure they appear in system dropdown menus.

📐 1. Understanding the Hierarchy

The system operates on a **Strict Top-Down Dependency**. You cannot add a "Child" unit if the "Parent" unit does not exist.

The Chain of Command:

State → Circle → District → Division → Range → Section/Beat → Compartment/ Sub Beat Name

---

🛠️ 2. Step-by-Step Registration Process

STEP 1 | Identify the Gap

- Navigate to the **Directory Master** module.
- Under **Directory Type**, select the **lowest level** that is currently missing.
- *Example:* If "Division" exists but "Range" is missing, select **Forest Range**.

STEP 2 | Define the Parent Context

Fill in the **Additional Details** to anchor your new unit.

- **Location:** Select the State and District.
- **Parent Mapping:** Select the existing Circle and Division.
- ⚠️ **STOP:** If the Circle or Division you need isn't in the list, you must go back to Step 1 and add the Circle/Division first.

STEP 3 | Entry & Validation

- **Input Name:** Type the official name in the text field (e.g., *"North Range"* or *"Beat No. 12"*).
- **Verification:** Ensure spelling matches official gazette records. This name will be visible to all users.

STEP 4 | Finalize & Sync

- Click **[Submit / Add]**.
- Wait for the "Success" notification.
- **Refresh:** Return to your data entry form and press **Ctrl + F5** to refresh the dropdown lists.

🔍 3. Troubleshooting Matrix

Issue	Observation	Resolution
Missing Entry	I added the Range, but I still can't see it.	**Hard Refresh:** Press Ctrl + F5 to clear the browser cache.
Wrong Parent	The Range is showing under the wrong Division.	**Re-Map:** Delete the entry and re-add it under the correct Parent Division.
Logic Break	I can't select a Beat.	**Check Range:** Ensure the "Forest Range" was created and saved correctly first.
