Food and Agriculture Organization of the United Nations

Mobile Guide: Enabling Geo-Tagging

For Android Devices

This guide ensures that **Latitude and Longitude** coordinates are automatically embedded into your project photos. **Note:** Photos without coordinates will be rejected by the MIS.

Step 1: System-Level Location Setup

Before the camera can save coordinates, your phone's GPS must be active.

1. **Open Settings:** Pull down your notification bar and tap the **Settings (⚙)** icon.
2. **Access Location:** Scroll down and select **Location** (or *Security & Location*).
3. **Toggle ON:** Ensure the main **Location switch** is in the **ON** position.
4. **Set App Permissions:** * Tap on **App Permissions** (or *App Location Permissions*).
    - Find the **Camera** app in the list.
    - Select **"Allow only while using the app."**
    - *Tip:* Ensure **"Use Precise Location"** is enabled if the option appears.

Step 2: Camera App Configuration

Every manufacturer has a slightly different menu. Find your brand below:

Brand	Steps to Enable
Samsung	Open Camera → Tap **Settings (⚙)** → Turn ON **Location tags**.
Google Pixel	Open Camera → Tap **Settings** → **More Settings** → Turn ON **Save location**.
Xiaomi / Redmi	Open Camera → Tap **Menu (≡)** → **Settings** → Turn ON **Save location info**.
OnePlus / Oppo	Open Camera → Tap **Settings** → Enable **Location** or **Store location info**.
Others	Open Camera → **Settings** → Look for **Geo-tagging** or **Save location**.

How to Verify Your Photo is Geo-Tagged

Before uploading to the MIS, check if the photo worked:

1. Open your **Gallery/Photos** app and select the image.
2. Swipe up or tap **"Details" / "Info (i)"**.
3. **Success:** You should see a map or a list of coordinates (e.g., **28.6139° N, 77.2090° E**).

Common Troubleshooting

- **"Location not found":** If you are indoors, GPS signals may be weak. Step outside into an open area and wait 10 seconds before taking the photo.
- **Battery Saver:** High-accuracy GPS is often disabled in "Battery Saver Mode." Turn it off while recording field data.
- **Permissions:** If the MIS app itself asks for location permissions, always select **"Allow."**
