Food and Agriculture Organization of the United Nations

📖 Harit-SANKALP User Manual

System for Afforestation, Nursery Knowledge & Linkage Platform

---

The system is designed as a "Chain of Custody," ensuring that every tree planted can be traced back to its biological source.

1️⃣ Access & Authentication

- **Portal URL:** Navigate to https://nationalcampa.nic.in/Harit-SANKALP/
- **Credentials:** Enter your registered **Email ID**, **Password**, and the **Captcha code**.
- **Landing Page:** Upon successful login, the Welcome Screen will display your profile and the navigation menu.

2️⃣ Registration Modules (SPA, SO, Nursery, RI, & Units)

Use these steps for Seed Production Areas (SPA)/ Candidate Plus Tree (CPT), Seed Orchards (SO), Nurseries, Research Institutes (RI), and Seed Processing cum Treatment Units.

- **Select Module:** Choose the relevant registration link from the menu.
- **Initiate:** Click the **Register** button to open the registration page.
- **Location Mapping (Revenue & Forest Directories):** The system requires dual-mapping to ensure the asset is correctly located within both the Revenue and the Forestry directory.
- **Additional Details**:
  - **Propagation Type**: Select "Seed" and “Vegetative”.
  - **Species**: Choose the specific tree species from the dropdown list.
  - **Information**: Enter the details as per the records.
- **Digital Attachments & Mapping:**
  - 📸 **Geo-Tagged Photo:** Upload relevant site photos.
    - Format: Must be .jpg or .jpeg.
    - Size: Minimum 50 KB.
    - Requirement: Image must contain embedded GPS coordinates (Latitude/Longitude).
  - 🗺️ **KML File (Keyhole Markup Language)**:
    - Format: Must be .kml.
    - Size: Maximum 5 MB.
    - Purpose: Provides the precise boundary or point mapping.
- **QR Generation:** Upon clicking **Save**, the system generates a **Unique QR Code** for the entity.

HARIT SANKALP

3 Seed Collection & Supply Chain

A. Seed Collection Information

To record the collection of seeds from registered sources and track their movement to treatment facilities.

- **Source Details:** Select the source (SPA/SO) and the specific name of the source.
- **Collection Details:** Select the Species, Quantity (in quintals), and Date of Collection.
- **Logistics & Treatment:** if Treatment is Required
  - If **Yes**: You must select a registered Processing cum Treatment Unit Name from the list.
  - **If No:** The seeds can be sent directly to a nursery. You must select a registered Nursery Name from the list.
- **Destination:** Select the **Processing cum Treatment Unit/ Nursery** where the seeds are being sent.
- **Verification:**
  - **Upload Geo-Tagged Photo**: Capture a photo of the collected seeds at the site.
    - Format: .jpg or .jpeg only.
    - Size: Minimum 50 KB.
    - Coordinates: GPS location must be embedded in the photo metadata.
- **Output:** Upon clicking **Save**, the system will generate a **unique QR code** for this collection.

B. Processing & Treatment Unit Information

To document the cleaning, sorting, treatment, and packaging of seeds, ensuring that only high-quality (viable) seeds move forward in the supply chain.

- **Unit Identification:** Select the geographic and administrative location of the Treatment Facility
- **Receiving & Identifying Seed Batches:**
  - **Processing Unit Name**: Select your facility name.
  - **Species**: Select the species of the batch you are currently processing.
  - **Unique Code / Collected Date**: A dropdown will display all pending batches sent to your unit. Select the relevant SCS Code (e.g., SCS-20260116-001).
  - **Auto-Populate**: Once selected, the system will automatically display the Source Name and the original Quantity Collected (e.g., 100 kg) for verification.
- **Seed Sorting (Quality Control):** Record the quantity of **Viable** vs. **Unviable** seeds.
- **Treatment & Packaging:**
  - **Treatment Type**: Choose between **Treated** (chemical/biological treatment applied) or **Untreated**.
  - **Treatment Date**: Select the date the treatment was performed.

HARIT SANKALP

- **Quantity of Seeds**: The final weight available after processing (in kg).
- **Packaging details**:
  - No. of Bag Packs: Total number of bags prepared.
  - Quantity per Bag: Weight of seeds in each individual bag (in kg).
- **Processing Date**: The date the entire batch was ready for dispatch.

- **Disposal (Dispatch to Destination):** This step tracks where the treated seeds are being sent for planting.
  - **Disposal To**: Select the destination type—either a Nursery (for seedling production) or a Seed Orchard (SO) (for direct sowing).
  - **Name of Disposal**: Select the specific registered name of the receiving Nursery or Orchard.Record where the treated seeds are sent (e.g., Nursery or SO).
- **System Output & Labeling**
  - Click Save to finalize the record.
  - The system generates a Unique Processing Code.

Note: After saving and approving all

C. Plant Production & Disposal Information

To monitor the growth of seedlings in the nursery (germination) and track the final stock available for afforestation or sale.

- **Nursery Operations**
  - **Geographic & Nursery Identification:** Select the location of the Nursery where the production is taking place:
    - **Location**: State, District, Circle, and Forest Division.
    - **Name of Nursery**: Select your registered Nursery from the dropdown list.
  - **Linking Processed Seed Data:** The system automatically pulls data from the Processing Unit to ensure continuity.
    - **The Data Table**: Once the Nursery is selected, a table will appear showing all incoming seed batches.
    - **Verification**: You will see the Processing Unit Unique No (PU-XXXX), Species Name, and the Quantity of seed received (in kg).
  - **General Planting Information (Nursery Operations):** Record the actual field operations for each seed batch:
    - **Total No. of Beds**: Enter the number of nursery beds used for this specific batch.
    - **Bed In-Date**: The date seeds were sown in the beds.
    - **Total No.s of Germination**: The count of seedlings that successfully sprouted.
    - **Bed Out-Date**: The seedling moving date.
  - **Plants in Stock Information (Ready for Use)** This section tracks the conversion of sprouts into healthy, plantable seedlings:
    - **Transplantation**: Record the number of seedlings successfully moved into Poly-pots or Root trainers.

HARITSANKALP

    - **Ready for Disposal**: The final count of healthy plants available for planting or sale.
    - **Age**: The system automatically calculates the age of the plants in days based on the Bed In-Date.
    - **Current Stock**: Displays the real-time balance of seedlings available in your nursery.
- **Disposal & Dispatch Details:** To officially record the movement of plants out of the nursery, capturing the recipient's details, the quality of the plants, and the specific planting location.
    - **Recipient Categorization (Sold To):** Select the category (Individual/ Private/ Government – Forest/ Government - Other than Forest).
    - **Contact Information:** The name of the organization or individual receiving the stock.
    - **Quality & Quantity of Dispatch:** The system tracks the health and size of the plants at the moment they leave your care.
        - **Plant Height**: Select the height bracket (e.g., 0–30 cm or 31–60 cm).
        - **Total No. of Plants**: Enter the specific number of seedlings being dispatched.
        - **Dispatch Date**: The actual date the plants left the nursery.
        - **Age of Plants**: This is auto-calculated by the system (e.g., 19 days) to provide data on seedling maturity at the time of planting.
    - **Location & Financials:**
        - **Plantation Site Name**: Provide the local name of the site where the plants will be established.
        - **Amount (if any)**: If the plants were sold, enter the total revenue generated. If distributed for free under a scheme, enter "0".
        - **KML File**: Upload the boundary or point data of the Plantation Site.
        - **Format**: .kml only.
        - **Size**: Max 5 MB.
    - **Post-Dispatch: QR codes & Slips:** Once you click **Save**, the dispatch record is finalized in the Disposal Table.
- **Output:** Generate and **Print the Dispatch Slip** containing the final QR code.

---

4 Data Reporting & Exports

- **Real-time Updates:** All reports are auto-updated as soon as data is saved in the modules.
- **Accessing Reports:** Navigate to the **Reports** section from the main navigation menu.
- **Filtering:** Use the built-in filters (Date, Species, Region) to customize your view.
- **Exporting:** * Click the **Export** button.
    - Choose your preferred format: **Word (.docx)**, **Excel (.xlsx)**, or **PDF**.

HARITSANKALP

Food and Agriculture Organization of the United Nations

💡 General Tips for Users

- **Geo-Coordinates:** Ensure your mobile GPS is active when taking photos for registration to avoid upload errors.
- **QR code Tracking:** Always keep a record of the generated QR codes; they are essential for tracking the "Seed-to-Plant" journey.
- **Session Security:** Always log out of the system after completing your data entry.

🛡️ Critical Data Security: The Approval & Locking Mechanism

In each of the core modules—**Seed Collection**, **Seed Processing**, and **Plant Disposal**—the system employs a strict validation protocol to ensure data reliability.

How the Process Works

1. **Draft Entry:** When you fill out a form and click **Save**, the record appears in the list below the form. At this stage, the data is in "Draft" mode.
2. **Verification:** Review the listed entry to ensure all quantities, dates, and locations are 100% accurate.
3. **The "Approve" Action:** Once verified, you must click the **Approve** button.
4. **System Lock:** Upon clicking Approve, the system **locks the record permanently**.
    - **Edit/Delete Disabled:** No further changes or deletions can be made to this entry.
    - **Workflow Activation:** The record is now officially "Live" and becomes visible/usable in the subsequent stages of the MIS (e.g., a Seed Collection entry must be approved before it can be "received" by a Processing Unit).

⚖️ Business Justification for the "Lock" Mechanism

Feature	Justification & Benefit
Prevents Data Corruption	Prevents accidental changes to quantities that have already physically moved to the next location (e.g., from Forest to Unit).
Ensures Accountability	Creates a "Fixed Point" in the audit trail. Once approved, the data represents an official commitment by the reporting officer.
Maintains Traceability	The QR code generated during approval is tied to a specific, unchangeable dataset. Allowing edits after QR generation would break the "Seed-to-Plant" tracking logic.
Regulatory Compliance	Complies with NIC and Ministry standards for "Non-Repudiation," ensuring that once information is submitted as a government record, it remains an authentic reference for auditors.

HARIT SANKALP

Food and Agriculture Organization of the United Nations

⚠️ Important Reminder for Field Officers

Think Before You Click: Double-check your data (especially quantities in kg and species names) **before** hitting the Approve button. If an error is discovered *after* approval, you must contact the System Administrator to rectify the record via the backend, as the front-end Edit/Delete options will be removed.
